The readings in this study session establish a framework for ethical conduct in the investment profession. The principles and guidance presented in the CFA Institute Standards of Practice Handbook (SOPH) form the basis for the CFA Institute self-regulatory program to maintain the highest professional standards among investment practitioners. A clear understanding of the CFA Institute Code of Ethics and Standards of Professional Conduct (both found in the SOPH) should allow practitioners to identify and appropriately resolve ethical conflicts, leading to a reputation for integrity that benefits both the individual and the profession. Material under “Guidance” in the SOPH addresses the practical application of the Code and Standards. The guidance for each standard reviews its purpose and scope, presents recommended procedures for compliance, and provides examples of the standard in practice.

READING ASSIGNMENTS

Reading 1  
Code of Ethics and Standards of Professional Conduct  
Standards of Practice Handbook, Ninth Edition  

Reading 2  
Guidance for Standards I–VII  
Standards of Practice Handbook, Ninth Edition

LEARNING OUTCOMES

Reading 1: Code of Ethics and Standards of Professional Conduct  
The candidate should be able to:

a. describe the structure of the CFA Institute Professional Conduct Program and the disciplinary review process for the enforcement of the Code of Ethics and Standards of Professional Conduct;

b. state the six components of the Code of Ethics and the seven Standards of Professional Conduct;

c. summarize the ethical responsibilities required by the Code of Ethics and the Standards of Professional Conduct, including the multiple sub-sections of each standard.
**Reading 2: Guidance for Standards I–VII**

The candidate should be able to:

1. **demonstrate a thorough knowledge of the Code of Ethics and Standards of Professional Conduct by interpreting the Code and Standards in various situations involving issues of professional integrity;**

2. **recommend practices and procedures designed to prevent violations of the Code of Ethics and Standards of Professional Conduct.**
Using examples and case studies, the readings in this study session demonstrate the use of the CFA Institute Code of Ethics and Standards of Professional Conduct as a body of principles for ethical reasoning and decision making. The readings serve as effective aids in understanding and internalizing the values and standards presented in the CFA Institute Standards of Practice Handbook. By applying the Code and Standards to case study conflicts, the candidate will gain experience identifying and explaining fundamental principles of conduct that serve as the basis for dealing with real world challenges.

The Asset Manager Code of Professional Conduct uses the basic tenets of the CFA Institute Code of Ethics and Standards of Professional Conduct to establish ethical and professional standards for firms managing client assets. The Asset Manager Code of Professional Conduct also extends the Code and Standards to address investment management firm practices regarding trading, compliance, security pricing, and disclosure.

READING ASSIGNMENTS

Reading 3  Ethics in Practice
Ethics in Practice, by Philip Lawton, CFA

Reading 4  The Consultant
Ethics Cases

Reading 5  Pearl Investment Management (A), (B), and (C)
Ethics Cases

Reading 6  Asset Manager Code of Professional Conduct
### LEARNING OUTCOMES

#### Reading 3: Ethics in Practice
The candidate should be able to:

- **a.** summarize the ethical responsibilities required by each of the six provisions of the Code of Ethics and the seven categories of the Standards of Professional Conduct;

- **b.** interpret the Code of Ethics and Standards of Professional Conduct in situations involving issues of professional integrity and formulate corrective actions where appropriate.

#### Reading 4: The Consultant
The candidate should be able to:

- **a.** evaluate professional conduct and formulate an appropriate response to actions that violate the Code of Ethics and Standards of Professional Conduct;

- **b.** prepare appropriate policy and procedural changes needed to assure compliance with the Code of Ethics and Standards of Professional Conduct.

#### Reading 5: Pearl Investment Management (A), (B), and (C)
The candidate should be able to:

- **a.** evaluate professional conduct and formulate an appropriate response to actions that violate the Code of Ethics and Standards of Professional Conduct;

- **b.** prepare appropriate policy and procedural changes needed to assure compliance with the Code of Ethics and Standards of Professional Conduct.

#### Reading 6: Asset Manager Code of Professional Conduct
The candidate should be able to:

- **a.** summarize the ethical responsibilities required by the six components of the Asset Manager Code;

- **b.** interpret the Asset Manager Code in situations that present issues of compliance, disclosure, or professional conduct;

- **c.** recommend practices and procedures designed to prevent violations of the Asset Manager Code.
STUDY SESSION 3
BEHAVIORAL FINANCE

Behavioral finance is introduced in the first study session on portfolio management because an understanding of the psychological factors that affect investment decision making is relevant for the management of both private wealth and institutional assets. Behavioral finance provides practical insight to investors’ perceptions and preferences regarding financial risk, making it a valuable aid to understanding client goals and concerns. The analysis of investment decision making from a behavioral finance perspective may also provide an explanation for certain market inefficiencies and suggest investment strategies to exploit them.

READING ASSIGNMENTS

Reading 7  Heuristic-Driven Bias: The First Theme
Beyond Greed and Fear: Understanding Behavioral Finance and the Psychology of Investing, by Hersh Shefrin

Reading 8  Frame Dependence: The Second Theme
Beyond Greed and Fear: Understanding Behavioral Finance and the Psychology of Investing, by Hersh Shefrin

Reading 9  Inefficient Markets: The Third Theme
Beyond Greed and Fear: Understanding Behavioral Finance and the Psychology of Investing, by Hersh Shefrin

Reading 10  Portfolios, Pyramids, Emotions, and Biases
Beyond Greed and Fear: Understanding Behavioral Finance and the Psychology of Investing, by Hersh Shefrin

Reading 11  Investment Decision Making in Defined Contribution Pension Plans
Pensions

Reading 12  Global Equity Strategy: The Folly of Forecasting: Ignore All Economists, Strategists, and Analysts
Global Equity Strategy, by James Montier

Reading 13  Alpha Hunters and Beta Grazers
Financial Analysts Journal

Note:
Some of the behavioral concepts presented in this study session are developed across multiple readings. Candidates should consider the readings as a whole in mastering the Learning Outcome Statements.
LEARNING OUTCOMES

Reading 7: Heuristic-Driven Bias: The First Theme
The candidate should be able to evaluate the impact of heuristic-driven biases on investment decision making, including representativeness, overconfidence, anchoring-and-adjustment, and aversion to ambiguity.

Reading 8: Frame Dependence: The Second Theme
The candidate should be able to:

a. explain how loss aversion can result in investors’ willingness to hold on to deteriorating investment positions;

b. evaluate the impact that the emotional frames of self-control, regret minimization, and money illusion have on investor behavior.

Reading 9: Inefficient Markets: The Third Theme
The candidate should be able to:

a. evaluate the impact that representativeness, conservatism (anchoring-and-adjustment), and frame dependence may have on security pricing and discuss the implications for market efficiency;

b. discuss the implications of investor overconfidence when trading.

Reading 10: Portfolios, Pyramids, Emotions, and Biases
The candidate should be able to:

a. discuss the influence of hope and fear on investors’ desire for security and investment potential;

b. explain how portfolios can be structured as layered pyramids and how such structures address needs associated with security, potential, and aspiration;

c. evaluate the impact of excessive optimism and overconfidence on investors’ decisions regarding portfolio construction.

Reading 11: Investment Decision Making in Defined Contribution Pension Plans
The candidate should be able to:

a. explain how limited participant knowledge and bounds to rationality, self-control, and self-interest may lead defined-contribution (DC) plan participants to construct inefficient investment portfolios;

b. evaluate the impact of status quo bias, myopic loss aversion, 1/n diversification, and the endorsement effect on DC plan participants’ investment decisions and the risk profile of their investment plans;

c. discuss the factors that may contribute to DC plan participants holding “excess” amounts of their own company’s stock in their plan.
Reading 12: Global Equity Strategy: The Folly of Forecasting: Ignore All Economists, Strategists, and Analysts
The candidate should be able to:

a. explain how the illusions of knowledge and control lead expert forecasters to be overconfident in their forecasting skills;

b. explain the ego defense mechanisms that forecasters rely on as justification for inaccurate forecasts;

c. explain why forecasts may continue to be used when previous forecasts have been inaccurate.

Reading 13: Alpha Hunters and Beta Grazers
The candidate should be able to:

a. contrast chronic market inefficiencies with acute inefficiencies and describe the behavioral factors (such as convoy behavior, Bayesian rigidity, price-target revisionism, and the ebullience cycle) that may give rise to chronic market inefficiencies;

b. explain the portfolio rebalancing behavior of holders, rebalancers, valuators, and shifters and evaluate the impact these rebalancing behaviors have on market efficiency.
This study session addresses the process of private wealth management and the construction of an investment policy statement for the individual investor. The investment policy statement is a blueprint for investing client assets—it identifies the needs, goals, and risk tolerance of the investor, as well as constraints under which the investment portfolio must operate, and then formulates an investment strategy to tax-efficiently reconcile these potentially conflicting requirements.

Because taxes and regulations vary from locality to locality, tax-efficient strategies for portfolio construction and wealth transfer are necessarily specific to the locality in which the investor is taxed. The study session focuses on investment strategies applicable across a wide range of localities. Although illustrations of such strategies may be presented from a country-specific perspective, candidates should focus on the underlying investment principles and be able to apply them to other tax settings.

The final reading examines the dynamic mix of human and financial capital during an investor’s lifetime and the challenge of meeting financial goals throughout this uncertain time frame. It specifically addresses mortality and longevity risks by integrating insurance products into the asset allocation solution.

**READING ASSIGNMENTS**

**Reading 14**  
Managing Individual Investor Portfolios  
*Managing Investment Portfolios: A Dynamic Process, Third Edition,* John L. Maginn, CFA; Donald L. Tuttle, CFA; Jerald E. Pinto, CFA; and Dennis W. McLeavey, CFA, editors

**Reading 15**  
Taxes and Private Wealth Management in a Global Context  
by Stephen M. Horan, CFA and Thomas R. Robinson, CFA

**Reading 16**  
Estate Planning in a Global context  
by Stephen M. Horan, CFA and Thomas R. Robinson, CFA
LEARNING OUTCOMES

**Reading 14: Managing Individual Investor Portfolios**

The candidate should be able to:

a. discuss how source of wealth, measure of wealth, and stage of life affect an individual investors’ risk tolerance;

b. explain the role of situational and psychological profiling in understanding an individual investor;

c. compare and contrast the traditional finance and behavioral finance models of investor decision making;

d. explain the influence of investor psychology on risk tolerance and investment choices;

e. explain the use of a personality typing questionnaire for identifying an investor's personality type;

f. compare and contrast risk attitudes and decision-making styles among distinct investor personality types, including cautious, methodical, spontaneous, and individualistic investors;

g. explain the potential benefits, for both clients and investment advisers, of having a formal investment policy statement;

h. explain the process involved in creating an investment policy statement;

i. distinguish between required return and desired return and explain the impact these have on the individual investor's investment policy;

j. explain how to set risk and return objectives for individual investor portfolios and discuss the impact that ability and willingness to take risk have on risk tolerance;

k. identify and explain each of the major constraint categories included in an individual investor's investment policy statement;

l. formulate and justify an investment policy statement for an individual investor;

m. determine the strategic asset allocation that is most appropriate for an individual investor's specific investment objectives and constraints;

n. compare and contrast traditional deterministic versus Monte Carlo approaches to retirement planning and explain the advantages of a Monte Carlo approach.
### Reading 15: Taxes and Private Wealth Management in a Global Context

The candidate should be able to:

a. compare and contrast basic global taxation regimes as they relate to the taxation of dividend income, interest income, realized capital gains, and unrealized capital gains;

b. determine the impact of different types of taxes and tax regimes on future wealth accumulation;

c. calculate accrual equivalent tax rates and after-tax returns;

d. explain how investment return and investment horizon affect the tax impact associated with an investment;

e. discuss the tax profiles of different types of investment accounts and explain their impact on after-tax returns and future accumulations;

f. explain how taxes affect investment risk;

g. discuss the relation between after-tax returns and different types of investor trading behavior;

h. explain the benefits of tax loss harvesting and highest-in/first-out (HIFO) tax lot accounting;

i. demonstrate how taxes and asset location relate to mean–variance optimization.

### Reading 16: Estate Planning in a Global Context

The candidate should be able to:

a. discuss the purpose of estate planning and explain the basic concepts of domestic estate planning, including estates, wills, and probate;

b. explain the two principal forms of wealth transfer taxes and discuss the impact of important non-tax issues, such as legal system, forced heirship, and marital property regime;

c. determine a family’s core capital and excess capital, based on mortality probabilities and Monte Carlo analysis;

d. evaluate the relative after-tax value of lifetime gifts and testamentary bequests;

e. explain the estate planning benefit of making lifetime gifts when gift taxes are paid by the donor, rather than the recipient;

f. evaluate the after-tax benefits of basic estate planning strategies, including generation skipping, spousal exemptions, valuation discounts, and charitable gifts;

g. explain the basic structure of a trust and discuss the differences between revocable and irrevocable trusts;

h. explain how life insurance can be a tax-efficient means of wealth transfer;

i. discuss the two principal systems (source jurisdiction and residence jurisdiction) for establishing a country’s tax jurisdiction;

j. discuss the possible income and estate tax consequences of foreign situated assets and foreign-sourced income;

k. evaluate a client’s tax liability under each of three basic methods (credit, exemption, and deduction) that a country may use to provide relief from double taxation;
I. describe the impact of increasing international transparency and information exchange on international estate planning.

**Reading 17: Low-Basis Stock**
The candidate should be able to:

a. explain the psychological considerations, investment risk, and tax issues related to concentrated holdings of low-basis stock;

b. discuss how specific risk changes over the three stages (entrepreneurial, executive, investor) of an investor’s “equity holding life;”

c. explain individual investors’ attitudes toward holding their own company stock during the entrepreneurial, executive, and investor stages;

d. critique the effectiveness of outright sales, exchange funds, completion portfolios, and hedging strategies as techniques to reduce concentrated equity risk.

**Reading 18: Goals-Based Investing: Integrating Traditional and Behavioral Finance**
The candidate should be able to:

a. explain the benefits of defining portfolio efficiency in terms of client goals rather than traditional measures of risk and return;

b. explain the limitations of traditional risk measurement and risk profiling in setting investment policy for individual investors;

c. justify the use of absolute performance and cash flow matching objectives to meet the goal of lifestyle protection;

d. compare lifestyle protection strategies with fixed horizon strategies and explain when the use of each approach is appropriate.

The candidate should be able to:

a. explain the concept and discuss the characteristics of “human capital” as a component of an investor’s total wealth;

b. discuss the earnings risk, mortality risk, and longevity risk associated with human capital and explain how these risks can be reduced by appropriate portfolio diversification, life insurance, and annuity products;

c. illustrate how asset allocation policy is influenced by the risk characteristics of human capital and the relative relationships of human capital, financial capital, and total wealth;

d. discuss and illustrate how asset allocation and the appropriate level of life insurance are influenced by the joint consideration of human capital, financial capital, bequest preferences, risk tolerance, and financial wealth;

e. discuss the financial market risk, longevity risk, and savings risk faced by investors in retirement and explain how these risks can be reduced by appropriate portfolio diversification, insurance products, and savings discipline;
f. discuss the relative advantages of fixed and variable annuities as hedges against longevity risk;

g. recommend basic strategies for asset allocation and risk reduction when given an investor profile of key inputs, including human capital, financial capital, stage of life cycle, bequest preferences, risk tolerance, and financial wealth.
Broadly defined, institutional investors include defined-benefit pension plans, defined-contribution plans, foundations, endowments, insurance companies, banks, and investment intermediaries. Each group faces a unique set of portfolio management investment objectives and constraints that must be addressed to effectively manage their investment portfolios.

The study session begins with an introduction of the concepts and practices important to determining the investment policy statement for an institutional investment management client. The next two readings then examine the specific issue of asset/liability management in the context of defined-benefit pension plans. The implications for asset allocation and risk management are relevant, however, for a wide range of institutions that manage assets to fund anticipated liabilities.

READING ASSIGNMENTS

Reading 20 Managing Institutional Investor Portfolios

Reading 21 Linking Pension Liabilities to Assets
by Aaron Meder and Renato Staub

Reading 22 Allocating Shareholder Capital to Pension Plans
Journal of Applied Corporate Finance

Note:
The concepts and practices important to institutional investment management appear in many readings throughout the Level III study sessions.
LEARNING OUTCOMES

Reading 20: Managing Institutional Investor Portfolios
The candidate should be able to:

a. contrast a defined-benefit plan to a defined-contribution plan, from the perspective of the employee and employer and discuss the advantages and disadvantages of each;

b. discuss investment objectives and constraints for defined-benefit plans;

c. evaluate pension fund risk tolerance when risk is considered from the perspective of the 1) plan surplus, 2) sponsor financial status and profitability, 3) sponsor and pension fund common risk exposures, 4) plan features, and 5) workforce characteristics;

d. formulate an investment policy statement for a defined-benefit plan;

e. evaluate the risk management considerations in investing pension plan assets;

f. formulate an investment policy statement for a defined-contribution plan;

g. discuss hybrid pension plans (e.g., cash balance plans) and employee stock ownership plans;

h. distinguish among various types of foundations, with respect to their description, purpose, source of funds, and annual spending requirements;

i. compare and contrast the investment objectives and constraints of foundations, endowments, insurance companies, and banks;

j. formulate an investment policy statement for a foundation, an endowment, an insurance company, and a bank;

k. contrast investment companies, commodity pools, and hedge funds to other types of institutional investors;

l. discuss the factors that determine investment policy for pension funds, foundations, endowments, life and nonlife insurance companies, and banks;

m. compare and contrast the asset/liability management needs of pension funds, foundations, endowments, insurance companies, and banks;

n. compare and contrast the investment objectives and constraints of institutional investors given relevant data, such as descriptions of their financial circumstances and attitudes toward risk.

Reading 21: Linking Pension Liabilities to Assets
The candidate should be able to:

a. contrast the assumptions concerning pension liability risk in asset-only and liability-relative approaches to asset allocation;

b. discuss the fundamental and economic exposures of pension liabilities and identify asset types that mimic these liability exposures;

c. compare pension portfolios built from a traditional asset-only perspective to portfolios designed relative to liabilities and discuss why corporations may choose not to implement fully the liability mimicking portfolio.

Reading 22: Allocating Shareholder Capital to Pension Plans
The candidate should be able to:

a. compare and contrast funding shortfall and asset/liability mismatch as sources of risk faced by pension plan sponsors;
b. explain how the weighted average cost of capital for a corporation can be adjusted to incorporate pension risk and discuss the potential consequences of not making this adjustment;

c. explain, in an expanded balance sheet framework, the effects of different pension asset allocations on total asset betas, the equity capital needed to maintain equity beta at a desired level, and the debt-to-equity ratio.
After identifying the client’s objectives and constraints and creating an investment policy statement, the manager’s next task in the planning process is to formulate capital market expectations. These forecasts of risk and return characteristics for various asset classes form the basis for constructing portfolios that maximize expected return for given levels of risk. This reading examines the process of setting capital market expectations and covers the major tools of economic analysis.

READING ASSIGNMENT
Reading 23  Capital Market Expectations

LEARNING OUTCOMES

Reading 23: Capital Market Expectations
The candidate should be able to:

a. discuss the role of, and a framework for, capital market expectations in the portfolio management process;

b. discuss, in relation to capital market expectations, the limitations of economic data, data measurement errors and biases, the limitations of historical estimates, ex post risk as a biased measure of ex ante risk, biases in analysts’ methods, the failure to account for conditioning information, the misinterpretation of correlations, psychological traps, and model uncertainty;

c. demonstrate the application of formal tools for setting capital market expectations, including statistical tools, discounted cash flow models, the risk premium approach, and financial equilibrium models;

d. explain the use of survey and panel methods and judgment in setting capital market expectations;

e. discuss the inventory and business cycles, the impact of consumer and business spending, and monetary and fiscal policy on the business cycle;
<p>| | |</p>
<table>
<thead>

STUDY SESSION 7
ECONOMIC CONCEPTS FOR ASSET VALUATION IN PORTFOLIO MANAGEMENT

“Macroanalysis and Microvaluation of the Stock Market” specifically addresses the link between economic activity and stock market valuation. “Dreaming with BRICs: The Path to 2050” addresses emerging markets, a dynamic and important subcategory of international investing. It examines the economic conditions under which certain developing countries might become a much stronger force in the world economy and the implications that would have for investors.

READING ASSIGNMENTS
Reading 24  Macroanalysis and Microvaluation of the Stock Market

Reading 25  Dreaming with BRICs: The Path to 2050
Global Economics Paper No. 99, by Dominic Wilson and Roopa Purushothaman

LEARNING OUTCOMES
Reading 24: Macroanalysis and Microvaluation of the Stock Market
The candidate should be able to:

a. contrast leading, lagging, and coincident economic indicators and explain the relationship between these cyclical indicator categories and stock market valuation;

b. demonstrate how changes in money supply, inflation, and interest rates influence stock and bond prices;

c. demonstrate the use of the dividend discount model, the free cash flow to equity model, and the earnings multiplier approach in estimating the value of the aggregate stock market;

d. compare and contrast alternative approaches with the estimation of earnings per share;

e. formulate and explain the “direction of change” and the “specific estimate” approaches to estimating an earnings multiplier for a stock market series;
f. evaluate the intrinsic value and estimated rate of return of the stock market by estimating future earnings per share and determining an appropriate earnings multiplier.

Reading 25: Dreaming with BRICs: The Path to 2050
The candidate should be able to:

a. contrast the economic potential of emerging markets such as Brazil, Russia, India, and China (BRICs) to that of developed markets, in terms of economic size and growth, demographics and per capita income, growth in global spending, and trends in real exchange rates;

b. explain why certain developing economies may have high returns on capital, rising productivity, and appreciating currencies;

c. evaluate the importance of technological progress, employment growth, and growth in capital stock in estimating the economic potential of an emerging market;

d. discuss the conditions necessary for sustained economic growth, including the core factors of macroeconomic stability, institutional efficiency, open trade, and worker education;

e. evaluate the investment rationale for allocating part of a well-diversified portfolio to emerging markets in countries with above average economic potential.
After developing capital market expectations, the fourth and final task in the planning process is determining the strategic asset allocation. Here the manager combines the investment policy statement and capital market expectations to determine target asset class weights. Maximum and minimum permissible asset class weights are often also specified as a risk-control mechanism. The investor may seek both single-period and multi-period perspectives in the return and risk characteristics of asset allocations under consideration. A single-period perspective has the advantage of simplicity. A multi-period perspective can address the liquidity and tax considerations that arise from rebalancing portfolios through time. Such a perspective can also address serial correlation (long- and short-term dependencies) in returns, but is more costly to implement.

READING ASSIGNMENTS
Reading 26  Asset Allocation

Reading 27  The Case for International Diversification
Global Investments, Sixth Edition, by Bruno Solnik and Dennis McLeavey, CFA

LEARNING OUTCOMES
Reading 26: Asset Allocation
The candidate should be able to:

a. summarize the function of strategic asset allocation in portfolio management and discuss its role in relation to specifying and controlling the investor’s exposures to systematic risk;
<p>| | |</p>
<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**Reading 27: The Case for International Diversification**

The candidate should be able to:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>a.</strong></td>
<td>evaluate the implications of international diversification for domestic equity and fixed-income portfolios, based on the traditional assumptions of low correlations across international markets;</td>
</tr>
<tr>
<td><strong>b.</strong></td>
<td>distinguish between the asset return and currency return for an international security;</td>
</tr>
<tr>
<td><strong>c.</strong></td>
<td>evaluate the contribution of currency risk to the volatility of an international security position;</td>
</tr>
<tr>
<td><strong>d.</strong></td>
<td>explain and justify the impact of international diversification on the efficient frontier;</td>
</tr>
<tr>
<td><strong>e.</strong></td>
<td>evaluate the potential performance and risk-reduction benefits of adding bonds to a globally diversified stock portfolio;</td>
</tr>
<tr>
<td><strong>f.</strong></td>
<td>explain why currency risk should not be a significant barrier to international investment;</td>
</tr>
<tr>
<td><strong>g.</strong></td>
<td>critique the traditional case against international diversification;</td>
</tr>
</tbody>
</table>
h. discuss the barriers to international investments and their impact on international investors;

i. distinguish between global investing and international diversification and discuss the growing importance of global industry factors as a determinant of risk and performance;

j. summarize the basic case for investing in emerging markets, as well as the risks and restrictions often associated with such investments.
The fixed-income market is one of the largest and fastest-growing segments of the global financial marketplace. Government and private debt currently constitute close to half of the wealth in international financial markets.

The basic features of the investment management process are the same for a fixed-income portfolio as for any other type of portfolio. Risk, return, and investment constraints are considered first. As part of this first step, however, an appropriate benchmark must also be selected based on the needs of the investor. For investors taking an asset-only approach, the benchmark is typically a bond market index, with success measured by the portfolio's relative investment return. For investors with a liability-based approach, success is measured in terms of the portfolio's ability to meet a set of investor-specific liabilities. The first reading addresses these primary elements of managing fixed-income portfolios and introduces specific portfolio management strategies. The second reading introduces additional relative-value methodologies.

**READING ASSIGNMENTS**

**Reading 28**  
*Fixed-Income Portfolio Management—Part I*  

**Reading 29**  
*Relative-Value Methodologies for Global Credit Bond Portfolio Management*  
## LEARNING OUTCOMES

### Reading 28: Fixed-Income Portfolio Management—Part I

The candidate should be able to:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>compare and contrast, with respect to investment objectives, the use of liabilities as a benchmark and the use of a bond index as a benchmark;</td>
</tr>
<tr>
<td>b.</td>
<td>compare and contrast pure bond indexing, enhanced indexing, and active investing with respect to the objectives, techniques, advantages, and disadvantages of each;</td>
</tr>
<tr>
<td>c.</td>
<td>discuss the criteria for selecting a benchmark bond index and justify the selection of a specific index when given a description of an investor’s risk aversion, income needs, and liabilities;</td>
</tr>
<tr>
<td>d.</td>
<td>review and justify the means, such as matching duration and key rate durations, by which an enhanced indexer may seek to align the risk exposures of the portfolio with those of the benchmark bond index;</td>
</tr>
<tr>
<td>e.</td>
<td>contrast and illustrate the use of total return analysis and scenario analysis to assess the risk and return characteristics of a proposed trade;</td>
</tr>
<tr>
<td>f.</td>
<td>design a bond immunization strategy that will ensure funding of a predetermined liability and evaluate the strategy under various interest rate scenarios;</td>
</tr>
<tr>
<td>g.</td>
<td>demonstrate the process of rebalancing a portfolio to reestablish a desired dollar duration;</td>
</tr>
<tr>
<td>h.</td>
<td>explain the importance of spread duration;</td>
</tr>
<tr>
<td>i.</td>
<td>discuss the extensions that have been made to classical immunization theory, including the introduction of contingent immunization;</td>
</tr>
<tr>
<td>j.</td>
<td>critique the risks associated with managing a portfolio against a liability structure, including interest rate risk, contingent claim risk, and cap risk;</td>
</tr>
<tr>
<td>k.</td>
<td>compare and contrast immunization strategies for a single liability, multiple liabilities, and general cash flows;</td>
</tr>
<tr>
<td>l.</td>
<td>compare and contrast risk minimization with return maximization in immunized portfolios;</td>
</tr>
<tr>
<td>m.</td>
<td>demonstrate the use of cash flow matching to fund a fixed set of future liabilities and contrast the advantages and disadvantages of cash flow matching to those of immunization strategies.</td>
</tr>
</tbody>
</table>

### Reading 29: Relative-Value Methodologies for Global Credit Bond Portfolio Management

The candidate should be able to:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>explain classic relative-value analysis, based on top-down and bottom-up approaches to credit bond portfolio management;</td>
</tr>
<tr>
<td>b.</td>
<td>discuss the implications of cyclical supply and demand changes in the primary corporate bond market and the impact of secular changes in the market’s dominant product structures;</td>
</tr>
<tr>
<td>c.</td>
<td>summarize the influence of investors’ short- and long-term liquidity needs on portfolio management decisions;</td>
</tr>
</tbody>
</table>
d. discuss common rationales for secondary market trading, including yield-spread pickup trades, credit-upside trades, credit-defense trades, new issue swaps, sector-rotation trades, yield curve–adjustment trades, structure trades, and cash flow reinvestment;

e. discuss and evaluate corporate bond portfolio strategies that are based on relative value, including total return analysis, primary market analysis, liquidity and trading analysis, secondary trading rationales and trading constraints, spread analysis, structure analysis, credit curve analysis, credit analysis, and asset allocation/sector analysis.
**STUDY SESSION 10**  
**PORTFOLIO MANAGEMENT OF GLOBAL BONDS AND FIXED-INCOME DERIVATIVES**

The previous study session builds on the basics of fixed-income portfolio management and introduces more targeted portfolio management strategies. This study session addresses international and emerging market strategies and the use of derivatives to manage interest rate and credit risks.

**READING ASSIGNMENTS**

Reading 30  
**Fixed-Income Portfolio Management—Part II**  

Reading 31  
**Hedging Mortgage Securities to Capture Relative Value**  

**LEARNING OUTCOMES**

**Reading 30: Fixed-Income Portfolio Management—Part II**  
The candidate should be able to:

a. evaluate the effect of leverage on portfolio returns and duration;

b. discuss the use of repurchase agreements (repos) to finance bond purchases and the factors that affect the repo rate;

c. critique the use of standard deviation, target semivariance, shortfall risk, and value at risk as measures of fixed-income portfolio risk;

d. demonstrate the advantages of using futures instead of cash market instruments to alter portfolio risk;

e. construct and evaluate an immunization strategy based on interest rate futures;

f. explain the use of interest rate swaps and options to alter portfolio cash flows and exposure to interest rate risk;

g. compare and contrast default risk, credit spread risk, and downgrade risk and demonstrate the use of credit derivative instruments to address each risk in the context of a fixed-income portfolio;
h. explain the sources of excess return for an international bond portfolio;

i. evaluate 1) the change in value for a foreign bond when domestic interest rates change and 2) the bond's contribution to duration in a domestic portfolio given the duration of the foreign bond and the country beta;

j. recommend and justify whether to hedge or not hedge currency risk in an international bond investment;

k. illustrate how breakeven spread analysis can be used to evaluate the risk in seeking yield advantages across international bond markets;

l. discuss the advantages and risks of investing in emerging market debt;

m. discuss the criteria for selecting a fixed-income manager.

**Reading 31: Hedging Mortgage Securities to Capture Relative Value**

The candidate should be able to:

a. demonstrate how a mortgage security's negative convexity will affect the performance of a hedge;

b. explain the risks associated with investing in mortgage securities and discuss whether these risks can be effectively hedged;

c. contrast an individual mortgage security to a Treasury security with respect to the importance of yield-curve risk;

d. compare and contrast duration-based approaches with interest rate sensitivity approaches to hedging mortgage securities.
because equity securities represent a significant portion of many investment portfolios, equity management is often a critical component of overall investment success. This study session focuses on the role of equities in an investment portfolio, the three major approaches used to manage equity portfolios, and the evaluation of equity managers.

READING ASSIGNMENT
Reading 32: Equity Portfolio Management

LEARNING OUTCOMES
Reading 32: Equity Portfolio Management
The candidate should be able to:

a. discuss the role of equities in the overall portfolio;

b. discuss the rationales for passive, active, and semiactive (enhanced index) equity investment approaches and distinguish among those approaches with respect to expected active return and tracking risk;

c. recommend an equity investment approach when given an investor’s investment policy statement and beliefs concerning market efficiency;

d. distinguish among the predominant weighting schemes used in the construction of major equity share indices and evaluate the biases of each;

e. compare and contrast alternative methods for establishing passive exposure to an equity market, including indexed separate or pooled accounts, index mutual funds, exchange-traded funds, equity index futures, and equity total return swaps;

f. compare and contrast full replication, stratified sampling, and optimization as approaches to constructing an indexed portfolio and recommend an approach when given a description of the investment vehicle and the index to be tracked;
| g. | explain and justify the use of equity investment–style classifications and discuss the difficulties in applying style definitions consistently; |
| h. | explain the rationales and primary concerns of value investors and growth investors and discuss the key risks of each investment style; |
| i. | compare and contrast techniques for identifying investment styles and characterize the style of an investor when given a description of the investor’s security selection method, details on the investor’s security holdings, or the results of a returns-based style analysis; |
| j. | compare and contrast the methodologies used to construct equity style indices; |
| k. | interpret the results of an equity style box analysis and discuss the consequences of style drift; |
| l. | explain the use of stock screens based on socially responsible investing criteria and discuss their potential effect on a portfolio’s style characteristics; |
| m. | compare and contrast long–short versus long-only investment strategies, including their risks and potential alphas, and explain why greater pricing inefficiency may exist on the short side of the market; |
| n. | explain how a market-neutral portfolio can be “equitized” to gain equity market exposure and compare and contrast equitized market-neutral portfolios with short-extension portfolios; |
| o. | compare and contrast the sell disciplines of active investors; |
| p. | contrast derivatives-based versus stock-based enhanced indexing strategies and justify enhanced indexing on the basis of risk control and the information ratio; |
| q. | discuss and justify, in a risk–return framework, the optimal portfolio allocations to a group of investment managers; |
| r. | explain the core-satellite approach to portfolio construction and discuss the advantages and disadvantages of adding a completeness fund to control overall risk exposures; |
| s. | distinguish among the components of total active return (“true” active return and “misfit” active return) and their associated risk measures and explain their relevance for evaluating a portfolio of managers; |
| t. | explain alpha and beta separation as an approach to active management and demonstrate the use of portable alpha; |
| u. | review the process of identifying, selecting, and contracting with equity managers, including the development of a universe of suitable candidates based on both qualitative and quantitative factors, the composition of equity manager questionnaires, and the analysis of fee structures; |
| v. | contrast the top-down and bottom-up approaches to equity research. |
“Corporate Governance” addresses the alignment of interests between a corporation’s managers and its equity shareholders. Although other investor classes are also concerned with corporate governance, the issue is particularly relevant for equity portfolio managers. Agency problems and conflicts of interest reduce a company’s appeal to investors and thus directly affect its valuation. The reading concludes with an examination of the relationship between a corporation and its stakeholders and the arguments for and against a stakeholder-based governance structure.

Management techniques, such as benchmark selection and style analysis, are presented as tools for effectively measuring and controlling equity portfolio attributes in an international environment in “International Equity Benchmarks.”

“Emerging Market Finance” presents a summary of financial and economic research relevant to investors in emerging markets.

READING ASSIGNMENTS

Reading 33   Corporate Governance
             The Theory of Corporate Finance, by Jean Tirole

Reading 34   International Equity Benchmarks
             Benchmarks and Investment Management, by Laurence B. Siegel

Reading 35   Emerging Markets Finance
             Journal of Empirical Finance
LEARNING OUTCOMES

**Reading 33: Corporate Governance**
The candidate should be able to:

a. explain the ways in which management may act that are not in the best interest of the firm’s owners (moral hazard) and illustrate how dysfunctional corporate governance can lead to moral hazard;

b. evaluate explicit and implicit incentives that can align management’s interests with those of the firm’s shareholders;

c. explain the shortcomings of boards of directors as monitors of management and state and discuss prescriptions for improving board oversight;

d. discuss why active monitoring by investors requires control, the various mechanisms by which control is exercised, and the limitations of active monitoring;

e. critique the effectiveness of debt as a corporate governance mechanism;

f. explain the social responsibilities of the corporation in a “stakeholder society” and evaluate the advantages and disadvantages of a corporate governance structure based on stakeholder rather than shareholder interests;

g. discuss the Cadbury Report recommendations for best practice in maintaining an effective board of directors whose interests are aligned with those of shareholders.

**Reading 34: International Equity Benchmarks**
The candidate should be able to:

a. discuss the need for float adjustment in the construction of international equity benchmarks;

b. discuss the trade-offs involved in constructing international indices, including 1) breadth versus investability, 2) liquidity and crossing opportunities versus index reconstitution effects, 3) precise float adjustment versus transactions costs from rebalancing, and 4) objectivity and transparency versus judgment;

c. discuss the effect that a country’s classification as either a developed or an emerging market can have on market indices and on investment in the country’s capital markets.

**Reading 35: Emerging Markets Finance**
The candidate should be able to:

a. discuss the process of financial liberalization and explain the expected impact on pricing and expected returns as a segmented market evolves into an integrated market;

b. explain the benefits that may accrue to an emerging market economy as a result of financial liberalization;

c. discuss the major issues confronting emerging market investors, including excess correlations during times of crisis (contagion), corporate governance, price discovery, and liquidity.
Alternative investments comprise groups of investments with risk and return characteristics that differ markedly from those of traditional stock and bond investments. Common features of alternative investments include:

1. relative illiquidity, which tends to be associated with a return premium as compensation;
2. diversifying potential relative to a portfolio of stocks and bonds;
3. high due diligence costs; and
4. performance appraisal that is unusually difficult, as a result of the complexity of establishing valid benchmarks.

Many institutional and high-net-worth individuals make portfolio allocations to alternative investments that are comparable in size to those they make to the traditional asset classes of stocks and bonds. In doing so, such investors may be seeking risk diversification and/or greater opportunities to apply active management skills and capture alpha. Portfolio managers who take advantage of the opportunities presented by alternative investments may have a substantial advantage over those who do not.

The first reading presents an overview of the investment classes generally considered as alternative investments. The balance of the study session examines the role of swaps, forwards, and futures in managing certain alternative investments.
REVIEW ASSIGNMENTS

Reading 36  Alternative Investments Portfolio Management  

Reading 37  Swaps  

Reading 38  Commodity Forwards and Futures  

LEARNING OUTCOMES

**Reading 36: Alternative Investments Portfolio Management**

The candidate should be able to:

a. characterize the common features of alternative investments and their markets and discuss how they may be grouped by the role they typically play in a portfolio;

b. explain and justify the major due diligence checkpoints involved in selecting active managers of alternative investments;

c. explain the special issues that alternative investments raise for investment advisers of private wealth clients;

d. distinguish among the principal classes of alternative investments, including real estate, private equity, commodity investments, hedge funds, managed futures, buyout funds, infrastructure funds, and distressed securities;

e. discuss the construction and interpretation of benchmarks and the problem of benchmark bias in alternative investment groups;

f. evaluate and justify the return enhancement and/or risk diversification effects of adding an alternative investment to a reference portfolio (for example, a portfolio invested solely in common equity and bonds);

g. evaluate the advantages and disadvantages of direct equity investments in real estate;

h. discuss the major issuers and buyers of venture capital, the stages through which private companies pass (seed stage through exit), the characteristic sources of financing at each stage, and the purpose of such financing;

i. compare and contrast venture capital funds with buyout funds;

j. discuss the use of convertible preferred stock in direct venture capital investment;

k. explain the typical structure of a private equity fund, including the compensation to the fund’s sponsor (general partner) and typical timelines;

l. discuss the issues that must be addressed in formulating a private equity investment strategy;

m. compare and contrast indirect and direct commodity investment;

n. explain the three components of return for a commodity futures contract and the effect that an upward- or downward-sloping term structure of futures prices will have on roll yield;

o. discuss the relationship between commodities and inflation and explain why some commodity classes may provide a better hedge against inflation than others;
p. identify and explain the style classification of a hedge fund, given a description of its investment strategy;

q. discuss the typical structure of a hedge fund, including the fee structure, and explain the rationale for high-water mark provisions;

r. explain the purpose and special characteristics of fund-of-funds hedge funds;

s. critique the conventions and special issues involved in hedge fund performance evaluation, including the use of hedge fund indices and the Sharpe ratio;

t. explain the market opportunities that may be exploited to earn excess returns in derivative markets that are otherwise zero-sum games;

u. discuss the sources of distressed securities and explain the major strategies for investing in them;

v. explain the importance of event risk, market liquidity risk, market risk, and “J-factor risk” for distressed securities investors.

**Reading 37: Swaps**
The candidate should be able to evaluate hedging strategies that rely on swaps and illustrate their inherent risk exposures.

**Reading 38: Commodity Forwards and Futures**
The candidate should be able to:

a. discuss the unique pricing factors for commodity forwards and futures, including storability, storage costs, production, and demand, and explain their influence on lease rates and the forward curve;

b. identify and explain the arbitrage situations that result from the convenience yield of a commodity and from commodity spreads across related commodities;

c. compare and contrast the basis risk of commodity futures with that of financial futures.
Effective risk management identifies, assesses, and controls numerous sources of risk, both financial and nonmarket related, in an effort to achieve the highest possible level of reward for the risks incurred. With the increasingly complex nature of investment management firms and investment portfolios, sophisticated risk management techniques have been developed to provide analysts with the necessary tools to properly measure the varying facets of risk.

The first reading in this study session describes a framework for risk management, focusing on the concepts and tools for measuring and managing market risk and credit risk. The study session continues with an overview of currency management, as global investing involves not only exposure to local market returns but also to exchange rate movements.

**READING ASSIGNMENTS**

**Reading 39**  
Risk Management  

**Reading 40**  
Currency Risk Management  
*Global Investments*, Sixth Edition, by Bruno Solnik and Dennis McLeavey, CFA

**LEARNING OUTCOMES**

**Reading 39: Risk Management**

The candidate should be able to:

a. compare and contrast the main features of the risk management process, risk governance, risk reduction, and an enterprise risk management system;

b. recommend and justify the risk exposures an analyst should report as part of an enterprise risk management system;
c. evaluate the strengths and weaknesses of a company’s risk management processes and the possible responses to a risk management problem;

d. evaluate a company’s or a portfolio’s exposures to financial and nonfinancial risk factors;

e. interpret and compute value at risk (VAR) and explain its role in measuring overall and individual position market risk;

f. compare and contrast the analytical (variance–covariance), historical, and Monte Carlo methods for estimating VAR and discuss the advantages and disadvantages of each;

g. discuss the advantages and limitations of VAR and its extensions, including cash flow at risk, earnings at risk, and tail value at risk;

h. compare and contrast alternative types of stress testing and discuss the advantages and disadvantages of each;

i. evaluate the credit risk of an investment position, including forward contract, swap, and option positions;

j. demonstrate the use of risk budgeting, position limits, and other methods for managing market risk;

k. demonstrate the use of exposure limits, marking to market, collateral, netting arrangements, credit standards, and credit derivatives to manage credit risk;

l. compare and contrast the Sharpe ratio, risk-adjusted return on capital, return over maximum drawdown, and the Sortino ratio as measures of risk-adjusted performance;

m. demonstrate the use of VAR and stress testing in setting capital requirements.

Reading 40: Currency Risk Management
The candidate should be able to:

a. demonstrate and explain the use of foreign exchange futures to hedge the currency exposure associated with the principal value of a foreign investment;

b. justify the use of a minimum-variance hedge when covariance between local currency returns and exchange rate movements exists and interpret the components of the minimum-variance hedge ratio in terms of translation risk and economic risk;

c. evaluate the effect of basis risk on the quality of a currency hedge;

d. evaluate the choice of contract terms (short, matched, or long term) when establishing a currency hedge;

e. explain the issues that arise when hedging multiple currencies;

f. discuss the use of options rather than futures/forwards to insure and hedge currency risk;

g. evaluate the effectiveness of a standard dynamic delta hedge strategy when hedging a foreign currency position;

h. discuss and justify other methods for managing currency exposure, including the indirect currency hedge created when futures or options are used as a substitute for the underlying investment;

i. compare and contrast the major types of currency management strategies specified in investment policy statements.
This study session addresses risk management strategies using forwards and futures, option strategies, floors and caps, and swaps. Collectively referred to as derivatives, these investment vehicles can be used for a variety of risk management purposes, including modification of portfolio duration and beta, implementation of changes in asset allocation, and creation of cash market instruments. Derivatives strategies have proven useful to both investors and borrowers, which accounts for their broad appeal. A growing number of security types now have embedded derivatives, and portfolio managers must be able to account for their effect on the return/risk profile of the security. After completing this study session, the candidate will better understand the advantages and disadvantages of derivative strategies, including the difficulties in creating and maintaining a dynamic hedge.

READING ASSIGNMENTS

Reading 41  Risk Management Applications of Forward and Futures Strategies
Analysis of Derivatives for the Chartered Financial Analyst® Program, by Don M. Chance, CFA

Reading 42  Risk Management Applications of Option Strategies
Analysis of Derivatives for the Chartered Financial Analyst® Program, by Don M. Chance, CFA

Reading 43  Risk Management Applications of Swap Strategies
Analysis of Derivatives for the Chartered Financial Analyst® Program, by Don M. Chance, CFA
LEARNING OUTCOMES

Reading 41: Risk Management Applications of Forward and Futures Strategies
The candidate should be able to:

a. demonstrate the use of equity futures contracts to achieve a target beta for a stock portfolio and calculate and interpret the number of futures contracts required;

b. construct a synthetic stock index fund using cash and stock index futures (equitizing cash);

c. create synthetic cash by selling stock index futures against a long stock position;

d. demonstrate the use of equity and bond futures to adjust the allocation of a portfolio between equity and debt;

e. demonstrate the use of futures to adjust the allocation of a portfolio across equity sectors and to gain exposure to an asset class in advance of actually committing funds to the asset class;

f. discuss the three types of exposure to exchange rate risk and demonstrate the use of forward contracts to reduce the risk associated with a future transaction (receipt or payment) in a foreign currency;

g. explain the limitations to hedging the exchange rate risk of a foreign market portfolio and discuss two feasible strategies for managing such risk.

Reading 42: Risk Management Applications of Option Strategies
The candidate should be able to:

a. compare and contrast the use of covered calls and protective puts to manage risk exposure to individual securities;

b. determine and interpret the value at expiration, profit, maximum profit, maximum loss, breakeven underlying price at expiration, and general shape of the graph for the major option strategies (bull spread, bear spread, butterfly spread, collar, straddle, box spread);

c. determine the effective annual rate for a given interest rate outcome when a borrower (lender) manages the risk of an anticipated loan using an interest rate call (put) option;

d. determine the payoffs for a series of interest rate outcomes when a floating rate loan is combined with 1) an interest rate cap, 2) an interest rate floor, or 3) an interest rate collar;

e. explain why and how a dealer delta hedges an option position, why delta changes, and how the dealer adjusts to maintain the delta hedge;

f. interpret the gamma of a delta-hedged portfolio and explain how gamma changes as in-the-money and out-of-the-money options move toward expiration.

Reading 43: Risk Management Applications of Swap Strategies
The candidate should be able to:

a. demonstrate how an interest rate swap can be used to convert a floating-rate (fixed-rate) loan to a fixed-rate (floating-rate) loan;

b. calculate and interpret the duration of an interest rate swap;
c. explain the impact on cash flow risk and market value risk when a borrower converts a fixed-rate loan to a floating-rate loan;

d. determine the notional principal value needed on an interest rate swap to achieve a desired level of duration in a fixed-income portfolio;

e. explain how a company can generate savings by issuing a loan or bond in its own currency and using a currency swap to convert the obligation into another currency;

f. demonstrate how a firm can use a currency swap to convert a series of foreign cash receipts into domestic cash receipts;

g. explain how equity swaps can be used to diversify a concentrated equity portfolio, provide international diversification to a domestic portfolio, and alter portfolio allocations to stocks and bonds;

h. demonstrate the use of an interest rate swaption 1) to change the payment pattern of an anticipated future loan and 2) to terminate a swap.
Because the investment process is not complete until securities are bought or sold, the quality of trade execution is an important determinant of investment results. The methods by which managers and traders interact with markets, choose appropriate trading strategies and tactics, and measure success in execution are key topics in the first reading.

The second reading discusses the ongoing monitoring and rebalancing of the investment portfolio, integral parts of the portfolio management process. Portfolio managers must understand the reasons for monitoring portfolios and be able to formulate appropriate portfolio rebalancing policies.

**READING ASSIGNMENTS**

**Reading 44**  
Execution of Portfolio Decisions  

**Reading 45**  
Monitoring and Rebalancing  

**LEARNING OUTCOMES**

**Reading 44: Execution of Portfolio Decisions**

The candidate should be able to:

a. compare and contrast market orders with limit orders, including the price and execution uncertainty of each;

b. calculate and interpret the effective spread of a market order and contrast it to the quoted bid–ask spread as a measure of trading cost;

c. compare and contrast alternative market structures and their relative advantages;

d. compare and contrast the roles of brokers and dealers;
e. explain the criteria of market quality and evaluate the quality of a market when given a description of its characteristics;

f. review the components of execution costs, including explicit and implicit costs, and evaluate a trade in terms of these costs;

g. calculate, interpret, and explain the importance of implementation shortfall as a measure of transaction costs;

h. contrast volume weighted average price (VWAP) and implementation shortfall as measures of transaction costs;

i. explain the use of econometric methods in pretrade analysis to estimate implicit transaction costs;

j. discuss the major types of traders, based on their motivation to trade, time versus price preferences, and preferred order types;

k. describe the suitable uses of major trading tactics, evaluate their relative costs, advantages, and weaknesses, and recommend a trading tactic when given a description of the investor's motivation to trade, the size of the trade, and key market characteristics;

l. explain the motivation for algorithmic trading and discuss the basic classes of algorithmic trading strategies;

m. discuss and justify the factors that typically determine the selection of a specific algorithmic trading strategy, including order size, average daily trading volume, bid–ask spread, and the urgency of the order;

n. explain the meaning and criteria of best execution;

o. evaluate a firm's investment and trading procedures, including processes, disclosures, and record keeping, with respect to best execution;

p. discuss the role of ethics in trading.

**Reading 45: Monitoring and Rebalancing**

The candidate should be able to:

a. explain and justify a fiduciary's responsibilities in monitoring an investment portfolio;

b. describe and justify the monitoring of investor circumstances, market/economic conditions, and portfolio holdings and explain the effects that changes in each of these areas can have on the investor’s portfolio;

c. recommend and justify revisions to an investor's investment policy statement and strategic asset allocation, given a change in investor circumstances;

d. discuss the benefits and costs of rebalancing a portfolio to the investor’s strategic asset allocation;

e. contrast calendar rebalancing to percentage-of-portfolio rebalancing;

f. discuss the key determinants of the optimal corridor width of an asset class in a percentage-of-portfolio rebalancing program, including transaction costs, risk tolerance, correlation, asset class volatility, and the volatility of the remainder of the portfolio, and evaluate the effects of a change in any of these factors;

g. compare and contrast the benefits of rebalancing an asset class to its target portfolio weight versus rebalancing the asset class to stay within its allowed range;

</table>
Performance evaluation is a feedback step in the investment management process. It plays an integral role in assessing manager skills, as well as confirming manager compliance with investment policy, and should be documented in the investment policy statement. Performance evaluation and attribution also provide an essential measurement service to investment managers themselves. Competent portfolio managers should be proficient in the use of current concepts and methodologies for calculating, benchmarking, and interpreting investment returns.

READING ASSIGNMENTS

Reading 46: Evaluating Portfolio Performance

Reading 47: Global Performance Evaluation
Global Investments, Sixth Edition, by Bruno Solnik and Dennis McLeavey, CFA

LEARNING OUTCOMES

Reading 46: Evaluating Portfolio Performance
The candidate should be able to:

a. demonstrate the importance of performance evaluation from the perspective of fund sponsors and the perspective of investment managers;

b. explain the basic components of portfolio evaluation (performance measurement, performance attribution, and performance appraisal);

c. calculate, interpret, and contrast time-weighted and money-weighted rates of return and discuss how each is affected by cash contributions and withdrawals;

d. identify and explain potential data quality issues as they relate to calculating rates of return;
1. demonstrate the analysis of portfolio returns into components attributable to the market, to style, and to active management;

2. discuss the properties of a valid benchmark and evaluate the advantages and disadvantages of alternative types of performance benchmarks;

3. summarize the steps involved in constructing a custom security-based benchmark;

4. judge the validity of using manager universes as benchmarks;

5. evaluate benchmark quality by applying tests of quality to a variety of possible benchmarks;

6. discuss the issues that arise when assigning benchmarks to hedge funds;

7. distinguish between macro and micro performance attribution and discuss the inputs typically required for each;

8. demonstrate, justify, and contrast the use of macro and micro performance attribution methodologies to evaluate the drivers of investment performance;

9. discuss the use of fundamental factor models in micro performance attribution;

10. differentiate between the effect of the external interest rate environment and the effect of active management on fixed-income portfolio returns;

11. explain the management factors that contribute to a fixed-income portfolio’s total return and interpret the results of a fixed-income performance attribution analysis;

12. calculate, interpret, and contrast alternative risk-adjusted performance measures, including (in their ex post forms) alpha, information ratio, Treynor measure, Sharpe ratio, and M²;

13. explain how a portfolio’s alpha and beta are incorporated into the information ratio, Treynor measure, and Sharpe ratio;

14. demonstrate the use of performance quality control charts in performance appraisal;

15. discuss the issues involved in manager continuation policy decisions, including the costs of hiring and firing investment managers;

16. contrast Type I and Type II errors in manager continuation decisions.

---

### Reading 47: Global Performance Evaluation

The candidate should be able to:

1. evaluate the effect of currency movements on the portfolio rate of return, calculated in the investor’s base currency;

2. explain how portfolio return can be decomposed into yield, capital gains in local currency, and currency contribution;

3. explain the purpose of global performance attribution and calculate the contributions to portfolio performance from market allocation, currency allocation, and security selection;

4. explain active and passive currency management, relative to a global benchmark, and formulate appropriate strategies for hedging currency exposure;

5. explain the difficulties in calculating a multi-period performance attribution and discuss various solutions;

6. contrast and interpret alternative measures of portfolio risk and risk-adjusted portfolio performance;
g. explain the use of risk budgeting in global performance evaluation;

h. discuss the characteristics of alternative global and international benchmarks used in performance evaluation.
The Global Investment Performance Standards (GIPS®) contain ethical and professional standards for presenting investment performance to prospective clients. These guidelines provide for standardized performance calculation and presentation among investment managers, enabling investors to objectively compare manager return histories and clearly evaluate performance. This study session consists of a single reading that provides grounding in the requirements and recommendations of GIPS.

READING ASSIGNMENTS
Reading 48  
*Global Investment Performance Standards*  

LEARNING OUTCOMES

**Reading 48: Global Investment Performance Standards**
The candidate should be able to:

a. summarize the reasons for the creation of the GIPS standards, the standards’ evolution, and their benefits to prospective clients and investment managers;

b. formulate the objectives, key characteristics, and scope of the GIPS standards;

c. explain the fundamentals of compliance with the GIPS standards, including the definition of the firm, the conditions under which an investment management firm can claim compliance, and the correct wording of the GIPS compliance statement;

d. explain the requirements and recommendations of the GIPS standards with respect to input data, including accounting policies related to asset valuation and performance measurement;

e. summarize and justify the requirements of the GIPS standards with respect to return calculation methodologies, including the treatment of large external cash flows, cash and cash equivalents, and fees and expenses;
f. explain the requirements and recommendations of the GIPS standards with respect to composite return calculations, including methods for asset-weighting portfolio returns;

g. explain the meaning of “discretionary” in the context of composite construction and, given a description of the relevant facts, determine whether a portfolio is likely to be considered discretionary;

h. explain the role of investment mandates, objectives, or strategies in the construction of composites;

i. explain the requirements and recommendations of the GIPS standards with respect to composite construction, including switching portfolios among composites, the timing of the inclusion of new portfolios in composites, and the timing of the exclusion of terminated portfolios from composites;

j. explain the requirements of the GIPS standards for asset class segments carved out of multi-class portfolios;

k. explain the requirements and recommendations of the GIPS standards with respect to disclosures, including fees, the use of leverage and derivatives, conformity with local laws and regulations that conflict with the GIPS standards, and noncompliant performance records;

l. explain the requirements and recommendations of the GIPS standards with respect to presentation and reporting, including the required timeframe of compliant performance records, annual returns, composite market values, and benchmarks;

m. explain the conditions under which the performance record of a past firm or affiliation must be linked to or used to represent the historical record of a new firm or affiliation;

n. evaluate the relative merits of high/low, interquartile range, and standard deviation as measures of the dispersion of portfolio returns within a composite;

o. identify the types of investments that are subject to the GIPS standards for real estate and private equity;

p. state and explain the provisions of the GIPS standards for real estate and calculate total return, income return, and capital return for real estate assets;

q. state and explain the provisions of the GIPS standards for private equity;

r. explain the private equity valuation principles, including the hierarchy of fair valuation methodologies for private equity investments;

s. identify errors and omissions in given performance presentations, including real estate and private equity performance presentations;

r. explain the purpose, scope, and process of verification;

u. state and explain the requirements for compliance with the GIPS Advertising Guidelines.
